

# Software Imaging Test Files

Providing Improved Driver Testing & Better Print Quality

Software Imaging's driver testing services are built around a suite of powerful test tools. These tools are available under license to printer OEMs enabling them to perform their own testing and product validation. The suite includes a comprehensive set of test files (SITF) for use with popular applications.

## Real World Testing - Real World Results

Over the past 16 years, Software Imaging has amassed a huge library of test files and a vast amount of experience in driver testing. Although there are a small number of 3rd party testing tools and files available, these tend to focus on firmware validation and have not proved to be adequate for our own internal testing requirements. As a result, we have been developing our own set of test files and test tools designed to cover multiple geographic regions, operating systems and regional application software programs. Software Imaging is now making these tools available externally for use by our OEM customers.

SITF approaches the problem of effective quality assurance by delivering a comprehensive set of test files designed for use with a range of popular applications for a variety of geographic regions.

### Sample Applications:

- Adobe Acrobat
- Adobe Illustrator
- Adobe PageMaker
- Adobe Photoshop
- Corel Draw
- Corel WordPerfect
- Lotus 123
- Lotus Freelance
- Lotus WordPro
- Microsoft Access
- Microsoft Excel
- Microsoft PowerPoint
- Microsoft Publisher
- Microsoft Word
- Micrographix Designer

Test files are available in: English, Japanese, Chinese (Traditional and Simplified), and Korean. Region specific test files for Far Eastern applications are included as follows:

### Additional Japanese Applications:

- Fude-jiman
- Ichitaro

### Additional Chinese Applications:

- Han-Shu (Traditional)
- WPS2002 (Simplified)

### Additional Korean Applications:

- Han Paint
- Hangle (Wordian)
- Hunmin Presentation XP
- Hunmin Sheet XP
- Hunmin Word XP
- Nexcel

### Reference Material

---

All test files are supplied with hard copy reference prints. In addition, a list of GDI/DDI calls generated by the files through a known driver on Windows 2000 is also provided.

### About Software Imaging

---

Founded in 1989, Software Imaging is the world's largest independent developer of Microsoft Windows, Apple Macintosh and Linux imaging technologies, printer software solutions, printer drivers and related services. The company delivers Driver Development Kits (DDKs), technology licensing, retail & enterprise applications, consultancy, training, support and custom development services to customers around the world.
